## HW 2

Exercise 1. Find the velocity $X^{\prime}(t)$ of

- $X(t)=\left(e^{t}, \cos t, \sin t\right)$.
- $X(t)=(\sin (2 t), \ln (1+t), t)$.

Exercise 2. Let $A$ and $B$ be constant vectors. What is the velocity of

$$
X(t)=A+t B ?
$$

Exercise 3. Prove that if $X(t)$ has constant speed, then the velocity $X^{\prime}(t)$ is perpendicular to the acceleration $X^{\prime \prime}(t)$.

Exercise 4. Conversely, show that if $X^{\prime \prime}(t)$ and $X^{\prime}(t)$ are perpendicular for all $t$, then $X(t)$ has constant speed.

Exercise 5. At what points does the curve $\left(2 t^{2}, 1-t, 3+t^{2}\right)$ intersect the plane

$$
3 x-4 y+z-10=0 ?
$$

Exercise 6. Find the length of the spiral $X(t)=(\cos (4 t), \sin (4 t), t), 0 \leq t \leq \pi / 8$.
